* not a vitamin

* not a mineral

* not an herb

Transfer factor is:

**** MOLECULE **** from the colostrum that **recognizes** good and bad cells in the body and **kills** the bad ones...

Transfer Factor Plus

TRANSFER FACTOR (Improves Immune System)

"Transfer factor is a **highly concentrated immune messaging system**, designed by nature to transfer critical immune programming from one individual to another." **William J. Hennen, Ph.D. Biochemist**

Independent Study Results

4Life Transfer Factor™ & Transfer Factor Plus™

"Unprecedented" Immune Boosting Ability

<p>Recently we reported the initial results of a groundbreaking independent study using 4Life Transfer Factor™ and Transfer Factor Plus™. Both yielded unprecedented results in a study</p>	<p>showed that Transfer Factor Plus™ increase the NK cell Activity 248% above normal immune response without supplementation, or about five times higher than any of the other</p>
--	--

done by the [Institute of Longevity Medicine](#) in California, a laboratory recognized for its research and expertise in measuring the ability of ingredients to significantly boost the immune system.

4Life Transfer Factor™ and Transfer Factor Plus™ were tested for their ability to increase Natural Killer Cell (NK) activity [by killing live cancer cells](#). The research used peripheral blood mononuclear cells (PBMC) isolated from human volunteers. Test results showed that 4Life Transfer Factor™ increased the NK cell activity [103% above immune response without supplementation, more than two times higher than the next highest product](#). The study also

[previously tested products.](#)

Natural Killer Cells are an important part of our body's defense against infection and sickness. They seek and destroy infected or [malignant cells and cells infected by viruses \(colds/flu's\)](#).

David Lisonbee, President of 4Life Research™, in response to this research said, "These recent findings support and substantiate the reports from thousands of distributors who use Transfer Factor™ and Transfer Factor Plus™. The study also supports many other clinical experiences and studies we are familiar with. We are very pleased with the study results—[they come as no surprise to us](#)"

**PRELIMINARY REPORT (additional test results to follow)
Transfer factor testing**

11-5-99

Background and rationale: 1) Cancer is the second leading cause of death in the US. The rate of nearly every type of cancer is on the rise. Despite billions of dollars in research, the mortality rate has remained nearly unchanged since the 1960's using conventional treatments such as radiation, surgery and chemotherapy. Thus, there is considerable interest in using immune modulation as an adjuvant for cancer therapy. Natural killer cells are particularly important [in destroying cancer cells](#).

Purpose of study: 1) To determine the in vitro anti-cancer effects of Transfer Factor and Transfer Factor Plus using PBMC isolated [from human volunteers and assaying the increased ability of the NK cell population to kill K562 erythroleukemic cells](#).

Methods: 1) [PBMC killing of K 562 \(erythroleukemic\) cells](#)

Results 1) [Transfer Factor increased NK-cell killing by 100% and Transfer Factor Plus by 250%](#)

Conclusions: Transfer Factor and Transfer Factor Plus induced immune based lysis of K562 cells at a level unprecedented in the director's experience or [in the known medical literature. Since NK cell function is so crucial in killing cancer cells, these products are ideal candidates for cancer adjuvant therapy](#). In addition, NK cells form a first line of

defense against infections from viruses and certain other microorganisms. Killing assays against K562 cells have also been correlated with increased activity against chronic and acute infections as well.

Transfer Factor™ is a vital immune factor brought to us directly from Mother Nature. Every mother that breast feeds her infant passes on her immunity—all of the information her immune system has gained in her lifetime. This process begins with the first milk, called colostrum. The most valuable of the "immunity weapons" in colostrum are called transfer factors.

Through a special patented process licensed to 4Life Research™, concentrated transfer factors can now be EXTRACTED from cow colostrum. Our proprietary Transfer Factor™ product helps our bodies build up immunity to all the outside threats which the cow has been exposed to in its lifetime.

(Transfer Factor Plus™) is the next generation in immune system science. It combines the benefits of Transfer Factor XF with:

ThyRex™ (a thymus complex, containing Liposterolics, Thymic T-factor proteins, and other proteinaceous compounds)

Cordyvan™ a Polysaccharide Complex that activates the whole immune system at once, giving you superior protection.

IP6 Inositol hexaphosphate.

Cordyceps sinensis (a whole herb) (contains 7% cordyceptic acids)

B- Glucan (from bakers yeast)

(*Saccharomyces cerevisiae*) (whole plant)

B-Glucan (from oat) (*avena sativa*)

Mannans (from aloe vera) (leaf)

Maitake Mushroom (*Grifola frondosa*) (whole plant) (with concentrated D-fraction)

Shiitake Mushroom (*Lentinus edodes*) (whole plant) (5: 1 extract)

Other Ingredients: (Clove) (*Eugenia caryophyllata*) (aerial parts)

Transfer Factor Plus™ ^ is scientifically advanced immune system support.** It is a combination of ingredients that will give your immune system the tools to respond quickly and the knowledge to broaden its protective shield.**

****Our bodies are constantly in battle to balance themselves on a cellular level. The cellular war is between Good Cells (normal body cells) and Bad Cells (pathogens that invade our bodies). Bad cells attack and destroy healthy Good Cells in the body. The immune system is the body's War Machine to protect it from Bad Cells****

Transfer factors are the **intelligence and knowledge**—the **secrets** to break the codes to **destroy** enemy cells. They communicate these secret codes and **teach** the Good Cells WHICH cells are Bad, and HOW to **attack** them by revealing their weaknesses.

Transfer factors are proven effective immune modulators, **but** the immune system must have sufficient Immune Cells (**T-Cells, NK Cells, Macrophages, etc.**) to carry out the instructions from the transfer factors.

New research has given us more information on other important components of the immune system. In recent years, scientists have begun to realize the importance of the thymus (located beneath the breastbone) and its job in programming immune system cells. Unfortunately, as we age, the thymus decreases in its ability to function properly. The thymus produces a complex array of thymic factors which together educate immature lymphocytes (white blood cells) into mature T-cells.

ThyRex™ contains important proprietary thymic factors which support T-cells. Thymic proteins program the T-4 helper cells in the immune system, which in turn tell T-8 killer cells which cells to search and destroy.

Another important component of our immunity is the innate immune system. It is our first line of defense in the war against outside threats. This instinctive response requires no prior exposure to an infectious agent. The first and instinctive response is essential to the adaptive immune system because it dictates the response that will be needed for the future. Cordyvant contains glyconutrients like IP-6, maitake and shiitake mushrooms, and aloe vera to support your innate immune system.

A healthy immune system is important for achieving and maintaining optimum health, strength, energy, stamina, and quality of life.
