LYME DISEASE

"I have been helping a bed-ridden 44-year-old woman with lyme disease who has been in bed for the last 7 years. They have had her on long term antibiotics for 8 months now without improvement. Her mom put her on TF Plus (nine per day) two weeks ago and she told her mom today that she is feeling better already! I also heard from a friend of mine regarding her father. He has a rare form of leukemia and is too old for chemo. In February, they told her to take him home and keep him comfortable. They gave him 2-3 months to live. My friend called me and we started him on 12 TF Plus and a few other things. He is doing so well now that the blood blisters on his arms are clearing up and he is out and about. The doctors have finally started asking him what he is doing. He is telling everyone!" Kristie Barringer

"I have had Lyme Disease for sometime now. A friend recommended taking enhanced transfer factors. I was very skeptical about taking it because I have taken so many different types of pills, it just seemed useless. After noticing a decrease in stamina over a period of time, I decided to give enhanced transfer factors a try. I am absolutely convinced and believe that enhanced transfer factors helps my body repair on a daily basis."
Karen

Lyme Disease is a serious problem in the United States. Unfortunately it is difficult to diagnose after the initial stage of infection. I have observed that those patients who do well with treatment for Lyme (which can be very difficult to treat after the initial stage), do well if their immune systems are functioning optimally. Factors which promote good immune function include: proper diet, exercise, stress control, spiritual health, and immune enhancers. The best immune enhancer that I know of is transfer factors. I would start slowly and build up the dose slowly.

Ken Singleton, MD.

The beneficial effects of colostrum for Lyme Disease have been known for decades. In 1986, former congressman Berk Bedell actually hired a special farmer to create colostrum which was specific to his own strain of Lyme Disease. The congressman provided blood samples to the farmer and the farmer introduced them into a cow. The cow's body, in response to being inoculated with Lyme Disease bacteria in the blood sample, began to then manufacture immune substances (known as antibodies) against Lyme Disease. The cow was then impregnated. When the cow provided first milk after the birth of its calf, the first milk contained colostrum that held antibodies specific to the strain of Lyme Disease the congressman was infected with. The congressman was cured of his Lyme Disease after drinking the colostrum.

To read a detailed, 24-page story of the congressman and his experience with colostrum, read Politics in

Healing, written by Daniel Haley, available at <http://www.lymebook.com/politics>.
