My father has been diagnosed with aggressive prostate cancer. He is too old to operate, so the preferred treatment is aggressive radiotherapy. This also has its drawbacks because radiotherapy has severe toxicity towards normal cells at high dose, and minimal effect at low dose. Prostate cancer actually shows great resistance to radiotherapy so higher levels and frequent treatments are needed, and this of course is associated with greater toxicity and other risks.

So thankful to learn of the amazing ways that natural resveratrol assists with this exact treatment specifically by not only enhancing the prostate cancer cells' response to ionizing radiation, but also by naturally promoting apoptosis (cancer cell death), while naturally helping with detoxification afterwards. This is not theory - this is proven scientific fact that resveratrol is a powerful cancer fighter in so many different ways. "Pretreatment with resveratrol significantly enhances cell death and increases the efficacy of therapy." Needless to say, my dad is now on three packs a day :-)
