

---

Vic Smith from Stevens Point and Kevin Hentges Provided a bottle of PXP to a boy with some serious health issues. Here Vic explains what has happened with this 10, now 11 year old.

He was born with both kidneys, but the right one never did function, and the left one has become marginal. His bladder never would empty, and he has had stents in both ureters for the past 4 years. Every 6 months he would have to go to Madison every 2-3 months for surgery and/or cat scans, tests, ultrasounds, etc. If the stents needed replacing, they would be done at these visits. Doctors put him on the list for a new kidney.

He is also an ADD child, and doesn't favor math. His growth was stunted by his condition, and his eyes had yellow coloring instead of white. He had bags under his eyes daily, and his energy level was not what one would expect from a growing boy.

I started talking to his folks about what PXP had done for Ken Bonney, and they started to look at each other with tears in their eyes, then they looked at me and said "did you know about K?" I told them I had no idea that K had anything wrong with him, and that's when they shared his story.

Let's now move to today.....

Ultrasounds done 3 weeks ago showed the stents clearly because the inflammation was gone. He has lived with the inflammation for 4 years, but on August 2nd, the stents came out because the right kidney has begun to function, the left kidney is functioning better, and the bladder empties completely. He was taking PXP for only 2 weeks when the tests were done.

His mother says he has grown about an inch and a half in the past month following the PXP. The yellow is gone from his eyes, the bags are gone from under the eyes, his energy level is up, and his mental acuity has improved. His mother can tell you more..... Vic Smith.
