

FitLine Zellschutz Antioxy - Powerful Natural Antioxidants Helps with Cancer, Allergies, Cardiovascular Disease, Arthritis, Premature Aging, Varicose Veins etc

Super antioxidants FitLine Zellschutz is probably the best set of powerful natural antioxidants, which can be found

Antioxidants are vital in today's polluted and busy world. Many scientists believe that regular intake can prolong life by 20-30 years and to improve its quality. This is due to their ability to neutralize free radicals (highly reactive molecules that damage the structure and function of living cells).

The accumulation of free radicals is chain-cell damage and lead to degeneration, aging and disease, even cancer. Free radicals cause cell damage in at least three ways:

1. Demolition of the cell wall, leading to cell death;
2. Destruction of cell organelles, leading to impaired vitality, various diseases and premature aging due to cellular dysfunction and hypothyroidism;
3. Demolition of DNA in the nucleus, leading to serious problems in decoding the genetic information and possibly malignant degeneration (cancer).

The body has its own antioxidants, but they are not always able to cope with the environment and burdened with ever increasing negative factors. The main sources of free radicals are solar energy (due to ozone hole), pollution, pesticides, smoking, certain drugs (especially chemotherapy and radiotherapy), a plane flying at high altitudes, the strong stress and others.

Super Antioxidant FitLine Zellschutz protects all cells from degeneration and is extremely useful in:

- active or passive smokers;
- daily moderate to high exposure to air pollution – car exhaust, work in an environment with high concentrations of toxins and others.;
- exposure to chemicals or radiation overdoses;
- overexposure to sunlight;
- negative effects of congestion;
- increased risk of cardiovascular, liver, degenerative and cancer;
- prophylactically to all people who want to slow aging and maintain in good condition after your body, the 35-40;
- in the first trimester of pregnancy to reduce the risk of congenital anomalies;
- to keep young, healthy, supple and well-looking skin and reducing wrinkles;
- to prevent varicose veins and slowing their development, if it occurred.

Synergy – the whole is greater than the sum of the parts

FitLine Zellschutz is a powerful combination of ingredients, selected after careful study. Each of them alone has a beneficial effect on the body, but when combined their beneficial effect is enhanced even more.

From the perspective of holistic medicine this product is particularly interesting in that it brings in the human organism selected and harmoniously combined substances.

Observations over the past 400 years suggests that antioxidants is completely harmless and has amazing health benefits. Used across Europe and is known as "food of youth" because of its ability to strengthen collagen and elastin – the main ingredients of the skin, joints and blood vessels.

FitLine Zellschutz is water soluble and is absorbed very well by the body. Once in the body remains active 72 hours. It was found that an antioxidant is 20 times better than vitamin. C and 50 times – from vitamins. E.

FitLine Zellschutz is a powerful antioxidant that cleans with a broom as free radicals and is perhaps the main candidate for further research on cancer prevention.

FitLine Zellschutz provides improved peripheral circulation and restores the lost activity of capillaries and blood vessels. Also stabilized red blood cells and maintain the needed flexibility, strengthens weak blood vessels by stabilizing collagen and elastin as a result prevents purpura.

Here are some of the previously observed beneficial effects of Fitline Zellschutz:

- reduces the risk of cancer, cardiovascular disease, arthritis, premature aging;
- strengthens and rejuvenates skin, improves its elasticity and smoothness;
- reduces allergies (especially effective for hay fever, psoriasis, caused by sun damage);
- has a positive effect on blood circulation (anti-inflammatory, strengthens capillaries, veins and arteries and makes them more resistant to injury);
- relieves varicose veins, swollen legs and chronic venous insufficiency, reduces the risk of phlebitis, swelling and inflammation;
- prevents and helps recovery from heart attacks and strokes;
- act favorably on the joints (improves their flexibility, reduces pain in swollen joints and the negative effects of sports injuries);
- helps the treatment of peptic ulcer;
- increases the vitality of all cells, reducing the effects of stress, strengthens the immune system;
- improves eyesight and memory;
- reduces diabetes complications (angiopathy);
- relieves hay fever, asthma, chronic fatigue, etc...;
- protects the body from aging, degeneration and cancerous degeneration.
